DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Cohen (EP 0420256 A2) or.

Cohen et al. teaches the use of an unbonded carded web that is joined to a thermoplastic elastic film (page 5, lines 5-10, abstract).

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Srinivasan et al. (U.S. 5,851,935) or Quantrille et al. (U.S. 5,431,991).

Srinivasan et al. teaches the use of two unbonded carded webs joined to a thermoplastic elastic layer of each side (col. 6, lines 30-40, col. 5, lines 15-25). Quantrille '991 teaches the use of a thermoplastic elastic web between two unbonded carded webs (col. 7, lines 5-40).

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Srinivasan et al. (U.S. 5,851,935) or Quantrille et al. (U.S. 5,431,991).

The references teach an unbonded webs/elastic web laminate as noted above. They also teach numerous different thermoplastic elastomer and web materials. The instant invention claims the use of styrene based elastomers and different basis weights of materials. It would have been obvious to one of ordinary skill in the art to vary the basis weights of the laminate depending on the density of the material desired for the final product application. Selection of materials for the elastic layer as well as for the carded fibers from the options given in the references is taken as being within the ordinary skill of the art absent unexpected results.

Art Unit: 1772

Quantrille et al. teaches a bonding additive (col. 6, lines 40-50) as well as conjugate binding fibers (col. 10, lines 10-25) as well as formation of the elastic layer directly in line and by extrusion (col. 9, lines 5-10, col. 5, lines 25-35).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 703-308-2420. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 703-308-4251. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0651.
